

Sleek solution for access cards, photo ID badges and key fobs as a service

Producing your access cards, photo ID cards, key fobs and tags on premise is a complicated, costly and time-consuming task. With Nexus GO Cards as a Service, you can outsource the production and order ready-to-use cards and key fobs with only a few clicks.

Convenient

Log in and order your uniquely configured cards and key fobs with a few clicks.

Reliable

The credentials you order arrive on time and with the right configurations.

Cost-effective

No need to pay for onsite printer hardware, qualified staff or maintenance.

Mobile

Order via the mobile app or online from any computer.

Many organizations want to get access cards, photo ID badges and key fobs as a service, since they want to focus on their core business. Even so, many organizations produce their credentials on premise since it can be hard to find a supplier who can deliver new cards and key fobs cost effectively, reliably, conveniently and quickly.

Nexus GO Cards as a Service solves this problem. The Nexus service has a proven business case, guarantees high quality, offers unlimited flexibility in its production capacity and offers a priority delivery option.

Digital step-by-step process

The first step is to set up a personalized online catalogue of pre-configured cards and key fobs. There are a lot of different types of card technologies, access control systems, and visible security features on cards, which makes it a complex task to understand what types of cards and configurations your organization needs.

Some vendors handle this process manually, but Nexus has designed a digital step-by-step process that guides customers to the right cards for their access control environments. If you need personal help, Nexus's experts are ready to assist.

Streamlined user experience

When the initial setup is done, ordering the right credentials and accessories, such as card holders and lanyards, could not be easier. The Nexus GO Cards as a Service experience has been designed to be as streamlined as possible, even allowing the users order their own credentials and accessories. After you or your users log in, your uniquely personalized cards and key fobs are presented to you, and you just have to add personal information – everything else is handled by Nexus.

Nexus is delivering ready-to-use cards and key fobs to addresses throughout Europe.

Key features

- At the end of every month, you receive a report listing the cards that will expire the following month, allowing you to be proactive and make sure that your users always have a valid card.
- The priority service option gives you high-priority credentials faster than usual: orders placed before noon will be sent the same day.
- Cards and key fobs can be ordered in batches for re-badging projects or new installations.
- All orders are approved by the responsible people in your organization before being processed.
- It is easy to integrate the ordering portal with your existing systems, such as your intranet or identity and access management software.
- There are several options for photo capturing: you can use a web camera, mobile camera or a public photo booth with photo code, or simply upload a picture.
- You can place orders online from any computer or through the Nexus GO Cards as a Service app for iOS and Android.

9 easy steps to get going with Nexus GO Cards as a Service

- 1** Create an account on the online portal Nexus GO.

- 2** Choose if you want cards or key fobs.

- 3** Select which technologies you want to use.

- 4** Configure the card or key fob technologies to fit your access control systems.

- 5** Add the logotype you want to use and enter design instructions – Nexus's graphic designers will create your design.

- 6** Select what card accessories you want to make available to order, such as card holders or lanyards.

- 7** If you want to set up several different pre-configured cards or key fobs in your organization's personalized online catalog, repeat steps 2-6.

- 8** Select an invoice address, accept the terms and confirm the card request.

- 9** You will get an account and a login to the ordering portal when your organization's personalized online catalog is set up.

How to order a new card in Nexus GO Cards as a Service

1 Login to the ordering portal.

2 Choose between the pre-configured cards and key fobs in your organization's personalized online catalog.

3 If you have chosen a card, type in the card holders personal information.

4 If you have chosen a photo ID badge, upload a picture of the card holder, or take a new picture straight from the ordering portal.

5 Choose what card accessories to order, such as a lanyard with your organizations logotype and a card holder in hard plastics.

6 Choose between **normal** or **priority** delivery. If you choose priority delivery and order before noon, Nexus will send the card the same day.

7 Review and place your order.

8 Get the new card or key fob delivered to your door, ready to use with your access control systems.
